Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

First Line Contains Integer – Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int countZeroes(int arr[], int low, int high, int n) {
4     if (high >= low) {
5         int mid = low + (high - low) / 2;
6         if ((mid == 0 || arr[mid - 1] == 1) && arr[mid] == 0)
7             return n - mid;
8         if (arr[mid] == 1)
9             return countZeroes(arr, mid + 1, high, n);
10        return countZeroes(arr, low, mid - 1, n);
11    }
12    return 0;
13 }
14
15 int main() {
16     int m;
17     scanf("%d", &m);
18     int arr[m];
19     for (int i = 0; i < m; i++)
20         scanf("%d", &arr[i]);
21     printf("%d\n", countZeroes(arr, 0, m - 1, m));
22     return 0;
23 }
```

	Input	Expected	Got

Time taken 12 mins 27 secs

Marks 1.00/1.00

Grade **10.00** out of 10.00 (**100%**)

Question 1 | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`
Output: 3

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`
Output: 2

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

For example:

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int majorityElement(int* nums, int numsSize) {
4     int candidate = nums[0];
5     int count = 1;
6
7     for (int i = 1; i < numsSize; i++) {
8         if (nums[i] == candidate) {
9             count++;
10        } else {
11            count--;
12            if (count == 0) {
13                candidate = nums[i];
14                count = 1;
15            }
16        }
17    }
18
19    return candidate;
20}
21
22 int main() {
23     int n;
24     scanf("%d", &n);
25     int nums[n];
26     for (int i = 0; i < n; i++) {
27         scanf("%d", &nums[i]);
28     }
29
30     printf("%d\n", majorityElement(nums, n));
31
32     return 0;
33}
34

```

	Input	Expected	Got	
✓	3 3 2 3	3	3	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x , the floor of x is the largest element in array smaller than or equal to x . Write divide and conquer algorithm to find floor of x .

Input Format

First Line Contains Integer n – Size of array
Next n lines Contains n numbers – Elements of an array
Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int findFloor(int arr[], int low, int high, int x) {
4     if (low > high) return -1;
5
6     int mid = low + (high - low) / 2;
7
8     if (arr[mid] == x) {
9         return arr[mid];
10    } else if (arr[mid] > x) {
11        return findFloor(arr, low, mid - 1, x);
12    } else {
13        int floorRight = findFloor(arr, mid + 1, high, x);
14        return (floorRight == -1) ? arr[mid] : floorRight;
15    }
16}
17
18 int main() {
19     int n;
20     scanf("%d", &n);
21
22     int arr[n];
23     for (int i = 0; i < n; i++) {
24         scanf("%d", &arr[i]);
25     }
26
27     int x;
28     scanf("%d", &x);
29
30     int floorVal = findFloor(arr, 0, n - 1, x);
31     printf("%d\n", floorVal);
32
33     return 0;
34 }
```

Started on Wednesday, 17 September 2025, 10:34 AM**State** Finished**Completed on** Wednesday, 17 September 2025, 10:43 AM**Time taken** 8 mins 38 secs**Marks** 1.00/1.00**Grade** 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int findTwoSum(int arr[], int left, int right, int x, int *elem1, int *elem2) {
4     if (left >= right) return 0;
5
6     int sum = arr[left] + arr[right];
7     if (sum == x) {
8         *elem1 = arr[left];
9         *elem2 = arr[right];
10        return 1;
11    } else if (sum < x) {
12        return findTwoSum(arr, left + 1, right, x, elem1, elem2);
13    } else {
14        return findTwoSum(arr, left, right - 1, x, elem1, elem2);
15    }
16}
17
18 int main() {
19     int n;
20     scanf("%d", &n);
21
22     int arr[n];
23     for (int i = 0; i < n; i++)
24         scanf("%d", &arr[i]);
25
26     int x;
27     scanf("%d", &x);
28
29     int elem1, elem2;
30     if (findTwoSum(arr, 0, n - 1, x, &elem1, &elem2)) {
31         printf("%d\n%d\n", elem1, elem2);
32     } else {
33         printf("No\n");
34     }
35
36     return 0;
37 }
38

Question 1 | Correct Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5	12 34 67 78 98
67 34 12 98 78	

Answer:

```

1 #include <stdio.h>
2
3 void swap(int *a, int *b) {
4     int temp = *a;
5     *a = *b;
6     *b = temp;
7 }
8
